

Pacific Palisades Community Council PROW Cell Tower Motion

PPCC opposes the proposed installation of wireless telecommunications (WT) antennas and related equipment (cell towers) at 302 Mt. Holyoke, and in all public rights of way (PROWs) in Pacific Palisades without 1) WT providers, including AT&T, Verizon and T-Mobile, providing advance written notice of all proposals for cell towers in PROWs to all property owners within 500 feet of the proposed facility, to relevant homeowner associations and to the PPCC prior to the filing of any permit application or, in cases where a permit may not be required (e.g., equipment upgrades, currently exempt utility poles), prior to initiating construction; and 2) WT providers developing and implementing a master plan for all PROW installations in Pacific Palisades. Such master plan shall be established with meaningful input from the local community and shall include, without limitation:

- an assessment of current coverage capabilities and projected coverage requirements, including voice, data and interior structure coverage;
- a feasibility analysis as to existing, available and proposed new sites;
- a portfolio of design options, including light pole and "stealth" designs, for community input and recommendation;
- a survey of community opinion regarding coverage, location and design.

Adopted 9/13/12
