

Oak Woodland

A Supermarket in the Foothills

This diverse mix of native trees, shrubs and perennials stabilizes slopes with a dense network of roots and provides shelter and food for wildlife. Many animal species rely on the feast of acorns, nuts, berries, seeds, leaves and nectar that oak woodlands provide. A complex food web comprised of birds, mammals, reptiles, insects and more is made possible by the wild version of a well-stocked produce aisle.

Un Supermercado en las Colinas

Este variado bosque de árboles y arbustos nativos estabiliza las laderas con una densa red de raíces y proporciona refugio y alimento a la fauna. Muchas especies dependen del festín de bellotas, nueces, bayas, semillas, hojas y néctar que proporcionan los robledales. Una compleja red alimentaria con aves, mamíferos, reptiles, insectos y demás es posible gracias a la versión silvestre de un pasillo de productos bien surtido.
